

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

## THE NOTIFIABLE DISEASES.

## PREVALENCE DURING 1920 IN STATES.

**ANTHRAX, CEREBROSPINAL MENINGITIS, DENGUE, DIPHTHERIA, GONORRHEA, INFLUENZA, MALARIA, MEASLES, PNEUMONIA, POLIOMYELITIS, RABIES, ROCKY MOUNTAIN SPOTTED FEVER, SCARLET FEVER, SEPTIC SORE THROAT, SMALLPOX, SYPHILIS, TUBERCULOSIS (ALL FORMS AND PULMONARY), TYPHOID FEVER, AND TYPHUS FEVER.**

The tables which appear on the following pages have been compiled from data furnished by the health officers of the several States. The data for syphilis and gonorrhea were furnished by the Division of Venereal Diseases of the Public Health Service. The following table shows the States for which morbidity and mortality data were received:

Morbidity.	Mortality.	Morbidity.	Mortality.
Alabama.	Alabama.	Montana.	Missouri. <sup>1</sup>
Arizona.	Arizona. <sup>1</sup>	Nebraska.	Nebraska.
Arkansas.	Arkansas.	New Hampshire.	New Jersey.
California.	California.	New Jersey.	New Mexico.
Colorado.	Colorado.	New Mexico.	New York.
Connecticut.	Connecticut.	New York.	North Carolina.
Delaware.	Delaware.	North Carolina.	North Dakota.
District of Columbia.	District of Columbia.	North Dakota.	Oklahoma.
Florida.	Florida.	Ohio.	Oregon.
Georgia.	Georgia.	Oregon.	Pennsylvania.
Hawaii.	Hawaii.	Pennsylvania.	Porto Rico.
Idaho.	Idaho.	Porto Rico.	Rhode Island.
Illinois.	Illinois.	Rhode Island.	South Carolina.
Indiana.	Indiana.	South Carolina.	South Dakota.
Iowa.	Iowa.	South Dakota.	Texas.
Kansas.	Kansas.	Texas.	Virginia.
Louisiana.	Kentucky.	Virginia.	Washington.
Maine.	Louisiana.	Washington.	West Virginia.
Maryland.	Maine.	West Virginia.	Wisconsin.
Massachusetts.	Maryland.	Wisconsin.	Wyoming.
Michigan.	Massachusetts.		
Minnesota.	Michigan.		
Mississippi.	Minnesota.		

<sup>1</sup> Data not given by months.

For the purpose of comparison with States, the data for New York City are given in a separate table.

The populations given in the tables and used in computing case and death rates were estimated as of July 1, 1920, by using the returns of the United States censuses of April 15, 1910, and January 1, 1920.

For most of the diseases four tables are given: (1) Medians, (2) morbidity, (3) mortality, (4) rates.

It is believed that the median gives a better idea of the usual conditions than does the arithmetical average, which has been used in former publications.

In ascertaining the medians,<sup>1</sup> data for the years 1913 to 1919, inclusive, were used, but for many States information was not available for the full seven years. The column headed "Number of years included" shows the number of years for which data were obtained.

In comparing the figures for 1920 with the medians for preceding years, it should be borne in mind that an increase in the number of cases reported may indicate that there were more cases of the particular disease in the State during 1920, or it may indicate that the cases were better reported by the physicians.

A relatively large number of reported cases of a communicable disease, as indicated by a high case rate (and more especially when accompanied by a relatively small number of deaths, as indicated by a low fatality rate), usually means that the health department of that State is active and that the cases of the disease are being well reported by the practicing physicians. It does not necessarily mean that the disease is more prevalent in that State than in other States. A high fatality rate may mean that the disease was unusually virulent in a State, that the physicians did not treat the disease in that State with the success usual elsewhere, or that the practicing physicians did not report all of their cases. On the other hand, an unusually low fatality rate may be due to the fact that the disease in the State was unusually mild, that the physicians treated it with unusual success, that the practicing physicians reported their cases satisfactorily, or that the registration of deaths was incomplete, or the assignment of the causes of death inaccurate.

In some instances comparatively large numbers of cases of diseases reported in certain States may be due to the system of reporting rather than to unusual prevalence of the diseases. For instance, in Mississippi physicians report some diseases monthly to the State health officer, giving the number of cases occurring in their practice during the month. This method of reporting probably is responsible, in part, at least, for the comparatively large number of cases of certain diseases reported in Mississippi.

Summaries of reported cases and deaths from communicable diseases, similar to the summary here presented, have been issued by the United States Public Health Service for the years 1912 to 1919, inclusive (Reprints numbered 163, 208, 298, 345, 426, 505, 551, and 643).

---

<sup>1</sup> The median has been defined as the magnitude of the middle item in an array. If the numbers of cases reported are arranged so that the greatest number reported in any one year is first, the second greatest number is second, and so on, then the number of cases in the center of the array is the median. The following illustration shows the method followed when data for five years are available: In a State reporting 60 cases in 1915, 79 cases in 1916, 71 cases in 1917, 58 cases in 1918, and 53 cases in 1919, the median is 60 cases.

*Cases reported and deaths registered in New York City during the calendar year 1920, from certain diseases, with indicated morbidity, mortality, and fatality rates.*
